Please note:

The information covered in the statistical release for large scale agriculture 2006 was collected from enterprises within the commercial large scale farming sector that had an annual gross farming income of R3 million and above.

In this publication, Statistics South Africa releases the results of a survey of the large scale agriculture sector for the financial year ending 28 February 2006.

This survey covered enterprises within the large scale agriculture sector that are registered for Value Added Tax (VAT) and/or Income Tax (IT) and are primarily involved in farming activities e.g. growing of field crops, the raising of livestock and the production of milk, eggs and wool.

The results of the survey of large scale agriculture will be used to compile estimates for the Department of Agriculture's National Accounts and as inputs to the Gross Domestic Product (GDP) and its components.

Note: This survey excludes all enterprises rendering agricultural services such as harvesting, baling, threshing etc., enterprises engaged in forestry, logging and related services as well as enterprises engaged in ocean and coastal fishing.

Please note:

The Department of Trade and Industry has amended the cut-off points from R2 million (as used in the Survey of Large Scale Agriculture 2005) to R3 million (as used in the Survey of Large Scale Agriculture 2006).

The decrease in the number of large scale farming units that participated in the Survey of Large Scale Agriculture 2006 (as compared to the units in the Survey of Large Scale Agriculture 2005) should not be interpreted as a decrease in the large scale farming sector but rather the loss of large scale farming units due to the amendment of the DTI cut-off points from R2 million (in 2005) to R3 million (in 2006).

Key findings

Gross farming income

Gross farming income (excluding other income) of large scale farming units was R49 704 million for the financial year ending 28 February 2006. Figure 1 shows that Western Cape accounted for the largest share (R9 537 million or 19,2%), followed by KwaZulu-Natal (R8 964 million or 18,0%).

As indicated in Figure 3, approximately 52% of the total gross farming income (excluding other income) was generated from commercial farming in the animals and animal products division. Horticultural and field crop products were the second and third largest sources of income in the sector, with contributions of 27% and 16% respectively.

In KwaZulu-Natal (R5 218 million), Gauteng (R4 398 million), and Free State (R2 430 million), most of the farming income was generated from animal sales. On the other hand, in Western Cape (R4 999 million), Limpopo (R2 445 million) and Mpumalanga (R1 874 million) most of the farming income was generated from horticultural product sales. Sales of field crop products generated most farming income in Free State (R2 043 million), KwaZulu-Natal (R1 654 million) and Mpumalanga (R1 576 million) (Figure 4 and Table 5(a)).

Employment

The number of paid employees in large scale formal agriculture, at the end of the financial year, stood at 495 518 paid employees (Table 2). The largest number of paid employees in the large scale agricultural sector worked in the Western Cape (25,6% or 126 992 paid employees), followed by KwaZulu-Natal (16,6% or 82 285 paid employees) and Mpumalanga (12,9% or 64 227 paid employees). Large scale commercial farmers paid R6 624 million in salaries and wages. This amounts to 13,3% of the gross farming income generated in the large scale agricultural sector, and is also 16,2% of its total current expenditure for the same period (Table 1).

The number of owners/proprietors totalled 5 818 (Table 2). Total employment (permanent and seasonal employees together with proprietors) was 495 518 (Table 2).

There were 277 948 full-time workers and 211 752 casual workers at the end of the financial year. The large scale farming sector in the Western Cape (62 108 workers), KwaZulu-Natal (58 923 workers) and Mpumalanga (37 342 workers) accounted for the highest total number of full-time workers. The sector in Eastern Cape (11 428 workers) and Northern Cape (7 338 workers) accounted for the lowest number of full-time workers. The sector in Western Cape (63 729 workers), Mpumalanga (26 230 workers) and Limpopo (24 031 workers) accounted for the highest total number of casual workers. The sector in North West (11 020 workers) and Eastern Cape (10 272 workers) accounted for the lowest number of casual workers (Table 2).

Expenditure

Total current expenditure (excluding livestock purchases) by the large scale formal agricultural sector amounted to R40 886 million for the financial year ending 28 February 2006 (see Table 1 and 3(a)). Capital expenditure was R2 113 million. The large scale farming sector in the Western Cape (R8 540 million), KwaZulu-Natal (R6 251 million) and Gauteng (R6 065 million) accounted for the highest total current expenditure (excluding livestock purchases) for the reporting period. The sector in the Eastern Cape (R1 941 million) and Northern Cape (R1 558 million) accounted for the lowest total current expenditure.

Farming debt, market value of assets and gross farming income

The ratio of farming debt to the market value of farming assets in the large scale farming sector stood at 31% for the financial year ending 28 February 2006. The ratio was the highest in Free State (41%), followed by Northern Cape (40%) (Table 4).

The ratio of farming debt to gross farming income in the large scale farming sector was 39%. While this ratio varied considerably by province, it was by far the highest in Western Cape (55%) (Table 4). Possible factors contributing to the size of the ratio in Western Cape included:

- Less farming income was generated due to the decrease in horticultural crops;
- Mechanisation within the agricultural sector causing large scale farmers to incur heavy debt to import/purchase new machinery and equipment for farming.

Farming debt in the large scale farming sector amounted to R19 618 million. The sector in the Western Cape accounted for 26,7% of the debt, followed by Mpumalanga (13,1%), while the Eastern Cape had the lowest proportion of debt (4,0%).

Total value of losses

Losses refer to the value expenditure experienced through aspects such as theft (i.e. stock theft, pilfering and stealing of crops etc.), burglaries, natural disasters (fires, drought etc.), number of days lost due to absenteeism, predators etc. The large scale farming sector in Mpumalanga accounted for the highest level of losses for the financial year ending 28 February 2006 (R119 million), followed by large scale farmers in Western Cape (R111 million) and Eastern Cape (R101 million) (see Table 6).

Comparisons with results of the Survey of Large Scale Agriculture 2005

Caution is needed in comparing the results of this survey with results from previous surveys and censuses in the agricultural sector because of significant enhancements to the coverage of this survey. A valid basis for comparison is between enterprises included in both the Survey of Large Scale Agriculture 2005 and the Survey of Large Scale Agriculture 2006. The results for gross farming income by major division within agriculture and by province are summarised in Figures 5 (a-e).

The percentage increase/decrease in gross farming income for the major divisions within agriculture, comparing only enterprises in both the Survey of Large Scale Agriculture 2005 and Survey of Large Scale Agriculture 2006, was the biggest in Eastern Cape for 'field crops' (31% decrease from 2005 to 2006), North West for 'horticulture' (22% increase), Northern Cape for 'animals' (24% increase), KwaZulu-Natal for 'animal products' (36% increase), and North West for total gross farming income (including other income) (12% increase) (Figure 5 (a-e)).

It should however also be noted that the percentage increase in the losses experienced was the highest in the Eastern Cape (475% from 2005 to 2006) or an increase from R14 million to R81 million. This huge increase can be attributed to some of the following reasons:

- Natural disasters i.e. veld fires, climatic conditions (drought, excessive cold weather conditions) etc.;
- Swine fever that was experienced in the Eastern Cape during the financial year ending 28 February 2006;
- Pilfering and stealing of livestock;
- Losses of the dairy farmers due to power shortages.

Current expenditure (excluding livestock purchases)	Rand	40 886 627 859
Capital expenditure		2 113 725 624
Livestock purchases (at current 2006 prices)	Rand	8 260 741 903
Market value of farming assets (at current 2006 prices)	Rand	62 721 604 125
Farming debt (at current 2006 prices)	Rand	19 618 260 549
Losses (at current 2006 prices)	Rand	627 450 041

*The decrease in the number of farming units (as compared to the Survey of Large Scale Agriculture 2005) should not be interpreted as a decrease in the large scale farming sector, but is caused by the change in the DTI cut-off points to include units with annual turnover of R3 million and above in 2006 compared with R2 million and above in 2005.

Explanatory notes and definitions

1. General

In 2006 (1 March 2005 – 28 February 2006), Statistics South Africa (Stats SA) undertook a survey of units active in the agricultural sector within the Republic of South Africa. This survey covered the activities of commercial farms/entities in South Africa and which were registered for Value Added Tax (VAT) and/or Income Tax (IT) for the financial year ending 28 February 2006.

This statistical release is a summary of selected findings.

2. Scope of the Survey of Large Scale Agriculture 2006

The Survey of Large Scale Agriculture of Agriculture 2006 covers the following tax registered enterprises that are mainly engaged in farming activities such as:

- Growing of crops;
- Farming of animals; and/or
- Growing of crops combined with animal farming (mixed farming).

For purposes of the survey, farming means the following activities for commercial purposes:

- the growing of field crops, fruit, grapes, nuts, seeds, trees in a nursery, bulbs, vegetables and flowers in the open air or under cover;
- operations at nurseries excluding those predominantly engaged in reselling;
- the operation of tea, coffee and sugar plantations;
- the raising of livestock, game, poultry, rabbits, freshwater fish, furbearing and other animals; and
- the production of milk, wool, pelts/fur, eggs and honey.

Forestry e.g. timber, wattle, wood and other plantations, ocean fishing and agricultural services were not included in the survey.

Data in respect of agricultural smallholdings such as nurseries, vegetable gardens, flower farms and dairy farms are included in this release only in those cases where the products were intended for sale.

3. Survey year

Details relating to the area and market value of the farming unit, the number of owners, family members and employees involved in farming activities, and farming debt, were collected as at 28 February 2006. Data on land utilisation, employees' remuneration, gross farming income and expenditure, equipment purchased, and amounts spent on buildings erected and development work undertaken refer to the financial year ending on any date between 1 March 2005 and 28 February 2006, while the market value of movable farming assets was as at the end of the financial year.

4. Comparability with the previous surveys

Caution is needed in comparing the results of this survey with results from previous surveys and censuses in the agricultural sector.

- The Survey of Large Scale Agriculture 2005 covered only large scale enterprises registered for VAT and/or IT with an annual registered turnover of R2 million and above;
- The Survey of Large Scale Agriculture 2006 covered only large scale enterprises registered for VAT and/or IT with an annual registered turnover of R3 million and above (DTI cut-off points amended from R2 million to R3 million);
- The updating of Stats SA's business register with data obtained from the South African Revenue Service (SARS) resulted in a significantly improved frame as compared to the frames available for previous agricultural collections.

There were 6 826 large scale farming units that were originally drawn to participate in the Survey of Large Scale Agriculture 2006, compared to 8 380 large scale farming units originally recorded to participate in the Large Scale Survey of Agriculture 2005.

The decrease in the number of large scale farming units that participated in the Survey of Large Scale Agriculture 2006 (as compared to the units in the Survey of Large Scale Agriculture 2005) should not be interpreted as a decrease in the large scale farming sector but rather the loss of large scale farming units due to the amendment of the DTI cut-off points from R2 million (in 2005) to R3 million (in 2006).

A valid basis for comparison is between enterprises included in the 2002 Census of Commercial Agriculture, the Survey of Large Scale Agriculture 2005 and the Survey of Large Scale Agriculture 2006 of Agriculture. The results for gross farming income by major division within agriculture are summarised in the key findings and shown in Figures 2, 3 and 4.

5. Farming unit

The data are collected in respect of farming units. A farming unit consists of one or more farms, smallholdings or pieces of land, whether adjacent or not, operated as a single unit and situated within the same province.

A farming unit means any unit on which one or more of the following farming operations are carried out for commercial purposes:

- the cultivation in the open air or under cover of field crops, fruit, grapes, nuts, seed bulbs, vegetable plants or flowers;
- the operation of a tea, coffee and sugar plantations;
- the breeding of livestock, poultry, game or other animals, including freshwater fish, furred animals and trade in livestock;
- the production of milk, wool, fur, eggs or honey.

Forestry e.g. timber, wattle, wood and other plantations, ocean fishing and agricultural services were not included in the Survey of Large Scale Agriculture 2006.

6. Farmer

The farmer is the person, partnership, company, close corporation or other enterprise that operates the farming unit for their own account; or the manager, foreman or other person to whom the control of the farming unit was entrusted.

7. Type of employment

'Owners and family members' refer to ownership by individuals or family and other forms of partnerships.

'Permanent employees' are employees who are employed on a permanent basis with benefits, such as leave.

'Casual and seasonal employees' include occasional and day labourers, e.g. shearers, reapers and fruit-pickers, but exclude contractors and their employees.

8. Gross farming income

Gross farming income as reported by the farmer includes income earned from agricultural products sold, divided in this release into field crops, horticultural products, animals and animal products, and all other products.

'Animals and animal products' include livestock, poultry, game and all other animals.

'All other products' include wild flowers, compost, firewood etc.

9. Current expenditure

Current expenditure is expenditure incurred by farming operations during the financial year in respect of the farming unit as reported by the farmer. These expenses include seed, stock- and poultry feeds, fertilisers, fuel, packing material, electricity purchased, interest paid and all other operating expenses. Railage and rented transport are also included with the relevant purchases.

10. Farming debt

Farming debt includes all obligations incurred in respect of normal farming activities, such as mortgages, loans and credits received from organisations such as banks, cooperative societies and private persons. Debt in respect of other business enterprises is not included.

Particulars regarding farming debt are based on the data submitted by respondents.

11. Abbreviations and symbols used

RSA	=	Republic of South Africa
Stats SA	=	Statistics South Africa
DTI	=	Department of Trade and Industry
SARS	=	South African Revenue Service
R	=	Rand
0	=	more than nil but less than 500
VAT	=	Value Added Tax
IT	=	Income Tax

12. Rounding-off of figures

The figures in the tables have been rounded off to the nearest final digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.

13. Survey methodology and design

The survey was conducted by mail, email, fax, telephone and personal visits to individual farmers and/or accountants to assist respondents to complete the questionnaires.

14. Non-sampling errors

Inaccuracies may occur due to imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, editing reported data and implementing efficient operating procedures.

1. AGRICULTURAL CONCEPTS AND DEFINITIONS

The following table contains the concepts and definitions Statistics South Africa (Stats SA) uses within the agricultural sector.

TERM	DEFINITION
Agricultural inputs	Consumable expendable inputs in agricultural production for both crops and livestock, for example fertilisers, seeds, veterinary drugs, etc.
Annual crops	Crops that are planted and harvested during the same production season.
Area harvested for grain	Area harvested for dry grain (whole grain, seed, beans or unshelled nuts) for commercial purposes, or to be retained for seed, animal feed or human consumption. It therefore excludes areas planted but not harvested owing to hail damage, fire, grazing, etc. and areas harvested but not used for grain, but for silage etc.
Area planted for grain	That part of the total area planted that is planted with the intention of harvesting it for grain rather than for silage, grazing or fodder.
Cash crop	Crop grown for sale rather than for consumption on the farm. Synonym is <i>food crop</i> .
Cereals	Wheat, coarse grains and rice.
Commercial farm	A farm producing agricultural products intended for the market, usually registered for value-added tax (VAT) and income tax.
Commercial farmer	A person who produces agricultural products intended for the market. See <i>subsistence farmer</i> .
Farming unit	One or more farms, smallholdings or pieces of land, whether adjacent or not, operated as a single unit and situated within the same magisterial district or province, on which cultivation is carried out for both commercial and non-commercial purposes, in the open air or under cover. It includes land rented from others, the farmstead and other buildings, cropland, pasture, veld, wasteland and dams, but excludes land leased to others. A farming unit could be owned by a single person, partnership, company, or close corporation etc.
Food crop	See <i>cash crop</i>
Grain	Harvested produce of cereals, pulses, oil crops and legumes.
Grain production	Grain actually removed from the field.
Hectare	Metric unit of land measurement equivalent to 1000 square metres.
Inter-planted crop	A crop planted between rows of another crop.
Irrigation	Artificial application of water to land to assist in the growing of crops and pastures.
Livestock	All animals or birds kept or reared mainly for agricultural purposes including cattle, sheep, goats, pigs, horses, poultry, rabbits, etc.
Losses	Value of expenditure experienced through theft (i.e. stock theft, pilfering and stealing of crops etc.), burglaries, natural disasters, number of days lost due to absenteeism, predators etc.
Oilseeds	Dry seeds harvested from annual oil-bearing crops used for food, feed, seed or industrial purposes.
Yield	Amount of product harvested per unit area.
Yield per harvested area	Yield from the area actually harvested.
Yield per planted area	Yield from the area planted.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advanced release calendar

An advanced release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data is available via on-line services, diskette, CD and computer printouts. For more details about our electronic data services, contact (012) 310 8600/ 8390/ 8351/ 8496/ 4892/ 8095.

You can visit us on the Internet at: www.statssa.gov.za
